

Section III: AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for conforming application software from a server system features to system support code installed on a user system when it is determined that said application software is not effecting a correct display of a selected web page on a user display screen, said method comprising:

separating navigational code associated with navigational features of said application software from cosmetic code associated with cosmetic features of said application software;
and

separately modifying said navigational ~~features~~ code and said cosmetic ~~features~~ code to conform to said system support code.

a 2. (Currently Amended) The method as set forth in claim 1 wherein said navigational ~~features are~~ code is re-coded to conform to said system support code.

3. (Original) The method as set forth in claim 1 wherein said modifying of said cosmetic features comprises removal of said cosmetic features.

4. (Original) The method as set forth in claim 3 wherein said navigational features are re-coded to conform to said system support code.

5. (Original) The method as set forth in claim 1 wherein said application software is selectively operable to present a predetermined number of application screens on a display device, said separating being accomplished by reading navigational and

cosmetic features of one screen at a time.

6. (Original) The method as set forth in claim 5 wherein for each screen presentation effected by said application software, said navigational and cosmetic features are checked one feature at a time.

7. (Original) The method as set forth in claim 1 wherein said modifying includes re-writing said application software to provide a replacement code, said replacement code being more generic than said system support code.

8. (Original) The method as set forth in claim 7 wherein said replacement code is Hyper Text Mark-up Language (HTML).

9. (Original) The method as set forth in claim 7 wherein said replacement code is an earlier version of said system support code.

10. (Original) The method as set forth in claim 9 wherein said system support code is a version of Java.

11. (Currently Amended) The method as set forth in claim ~~10~~ 9 wherein said system support code is JavaScript.

12. (Original) The method as set forth in claim 11 wherein said replacement code is an earlier version of JavaScript.

13. (Original) The method as set forth in claim 12 wherein said earlier version is Java 1.1.8.

14. (Currently Amended) The method as set forth in claim ~~13~~ 9 wherein said application software is a password processing

program.

15. (Currently Amended) A computer system comprising:

a system bus;

a processing device connected to said system bus;

a memory device connected to said system bus; and

a²
a display device connected to said system bus, said computer system being selectively operable for running application software, said application software being dependent upon system support code installed on said computer system, said application software being selectively operable for effecting presentations of ~~application screens~~ web pages on said display device, said ~~application screens~~ web pages including both navigational and cosmetic features, said computer system being further effective, when said web pages are not being correctly displayed on said display device, for separating navigational code associated with said navigational features of said application software from cosmetic features associated with cosmetic features of said application software, and separately modifying said navigational features code and said cosmetic features code to conform to said system support code.
